Dear Alice,

Thank you very much.

The three following books were missing from my list (I apologize), may I use their covers in the same way as you described in your last email?

Springer:  
Viale: The Forcing Method in Set Theory

Springer-Verlag:

Kechris: Classical descriptive set theory

Birkhäuser:

Bukovsky: The Structure of the Real Line

Thank you and best wishes, Philipp

Dear Philipp,

Thank you for your mail.

You are free to reuse the covers requested (Except - *Bartoszynski, Judah: Set theory: on the structure of the real line* – it seems to be published by another publisher) in the context of book reviews and recommendations.

A printable cover can be downloaded from our Springer Nature Cover Search [Springer Nature - Cover Search](#)

The only restriction is that the covers must be shown unchanged, meaning they should not be distorted, cropped, or otherwise altered.

A link to Springer Nature link is very much appreciated.

Thank you.

Alice

Dear Alice,

I would like to follow up on our conversation from 25 March 2025.

I would again like to post several book covers of Springer books as thumbnails on the website of the European Set Theory Society [settheory.eu](http://settheory.eu) (for educational purposes only), since I currently update the website. The European Set Theory Society is a not-for-profit Society registered in Italy and I am writing as its Secretary. I have the book covers from the Springer website.

Please let me know if it is fine to post the book covers (as thumbnails) on <http://settheory.eu/literature.html>. I will include links to your website. The current list of book covers is:

Springer:

Foreman, Kanamori: Handbook of Set Theory

Schimmerling: A course on set theory

Jech: Set Theory - The Third Millenium Edition, revised and expanded

Kanamori: The Higher Infinite

Schindler: Set Theory - Exploring Independence and Truth

Halbeisen: Combinatorial Set Theory Kechris: Classical descriptive set theory

Farah: Combinatorial set theory of C\*-algebras

Kechris, Miller: Topics in orbit equivalence

Birkhäuser:

Todorćević: Walks on ordinals and their characteristics

Bartoszyński, Judah: Set theory: on the structure of the real line

If you are not responsible for Birkhäuser copyright, please let me know.

Thank you and best wishes, Philipp Schlicht
